

# Fulvic MAX

**NEW**  
in Bulgaria

Panatop Fulvic Max ® is a worldwide innovation in agriculture. The first liquid fertiliser of its kind that combines highly concentrated fulvic acids, humic acids, amino acids and last but not least algae extract with additional trace elements. This combination regulates molecular, physiological and biochemical processes in the plant. It compensates for nutrient deficiencies during vegetation. Restores soil fertility by activating the microorganisms in the soil and stimulating their multiplication. Unblocks nutrients and transforms them into a maximally absorbable form, develops a strong root system and increases tolerance to biotic and abiotic stress. Preventive application to strengthen the plant's defences against drought, frost and waterlogging.

COMPOSITION	
Potassium fulvate	23 %
Fulvic acids	11,5 %
Humic acids	9,2 %
Potassium oxide(K <sub>2</sub> O)	2,3 %
Amino acids	3,5 %
Algae extract	5,8 %

МИКРОЕЛЕМЕНТИ	
Eisen (Fe)	0,24 %
Mangan (Mn)	0,12 %
Zink (Zn)	0,08 %
Bor (B)	0,08 %
Cupger (Cu)	0,04 %
Molybdän (Mo)	0,008 %

CHARACTERISTICS	
Density	1:15
PH value	7.5 ± 0.1
Application	100-200 ml/ha (1-2 treat-ments)
	600-800 ml/ha in soil
Packaging	5L/tube
